Practical Building Conservation: Stone (Volume 9) By Historic England

Stone considers the wide variety of historical uses, from simple masonry walling through to elaborate carving and decoration. The book considers why stone decays or fails and how to assess and understand the causes, before concentrating on the practical methods of treatment, repair and maintenance.

Editorial Review

Review
'This book belongs in the tool-kit of every specialist and general building contractor, of every trainer and educator and certainly of architects and surveyors. Amply populated by purposeful photographs and with illustrated diagnostic tables for easy reference, this book represents a coherent and eminently useable summary declaration not only of current thinking, but of longer-term intent.' Cornerstone (The Society for the Protection of Ancient Buildings) 'My overriding impression of this series is that it is comprehensive, well set out and easy to follow, and it should be of interest both to all involved in the repair and maintenance of historic buildings, and to the casual reader. Each volume stands alone or as part of a set. This represents a substantial body of work in the field of building conservation that is unlikely to be repeated in the near future. The tables and technical drawings are clear, and some of the photographs included are remarkable. The amount of information within each volume is staggering and must represent the nearest thing to a one-stop-shop for historic building practitioners.' Context: The Journal of the Institute of Historic Building Conservation

About the Author
The contents reflect the work of the Building Conservation and Research Team, their colleagues at Historic England, and their consultants and researchers, who together have many decades of accumulated experience in dealing with deteriorating building materials and systems of all types. This multi-disciplinary team of architects, surveyors, conservators and scientists are responsible for standard setting and research across a wide range of Historic England activities. The team specialises in dealing with the practical, technical and scientific aspects of building materials decay and their treatment. The aim has been to provide practical advice by advocating a common approach of firstly understanding the material or building element and why it is deteriorating, and then dealing with the causes. The books concentrate on those aspects which are significant in conservation terms, and reflect the requests for information received by Historic England.

Users Review

From reader reviews:

Ned Aguayo:

What do you in relation to book? It is not important with you? Or just adding material when you want something to explain what yours problem? How about your extra time? Or are you busy individual? If you don't have spare time to perform others business, it is make you feel bored faster. And you have spare time? What did you do? Every individual has many questions above. The doctor has to answer that question since just their can do that will. It said that about book. Book is familiar in each person. Yes, it is suitable.
