Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) From Springer

This book reports the latest advances on the design and development of mobile computing systems, describing their applications in the context of modeling, analysis and efficient resource management. It explores the challenges on mobile computing and resource management paradigms, including research efforts and approaches recently carried out in response to them to address future open-ended issues. The book includes 26 rigorously refereed chapters written by leading international researchers, providing the readers with technical and scientific information about various aspects of mobile computing, from basic concepts to advanced findings, reporting the state-of-the-art on resource management in such environments. It is mainly intended as a reference guide for researchers and practitioners involved in the design, development and applications of mobile computing systems, seeking solutions to related issues. It also represents a useful textbook for advanced undergraduate and graduate courses, addressing special topics such as: mobile and ad-hoc wireless networks; peer-to-peer systems for mobile computing; novel resource management techniques in cognitive radio networks; and power management in mobile computing systems.

Editorial Review

From the Back Cover

This book reports the latest advances on the design and development of mobile computing systems, describing their applications in the context of modeling, analysis and efficient resource management. It explores the challenges on mobile computing and resource management paradigms, including research efforts and approaches recently carried out in response to them to address future open-ended issues. The book includes 26 rigorously refereed chapters written by leading international researchers, providing the readers with technical and scientific information about various aspects of mobile computing, from basic concepts to advanced findings, reporting the state-of-the-art on resource management in such environments. It is mainly intended as a reference guide for researchers and practitioners involved in the design, development and applications of mobile computing systems, seeking solutions to related issues. It also represents a useful textbook for advanced undergraduate and graduate courses, addressing special topics such as: mobile and ad-hoc wireless networks; peer-to-peer systems for mobile computing; novel resource management techniques in cognitive radio networks; and power management in mobile computing systems.

About the Author

Dr Constandinos X. Mavromoustakis is currently Associate Professor at the Department of Computer Science at the University of Nicosia, Cyprus. His research interests are in the fields of wireless networks, mobile communication systems, digital broadcasting technologies and interactive television systems, QoS/QoE techniques and network management technologies.

Dr Evangelos Pallis is currently Associate Professor in the Department of Applied Informatics and Multimedia School of Applied Technology at Technological Educational Institute of Crete (TEIC) and co-director of Research and Development of Telecommunication Systems Laboratory “PASIPHAE” of the same Department. His main research interests are in the fields of wireless and mobile networks, digital video broadcasting (DVB) infrastructures and their convergence with broadband Internet services.

Dr George Mastorakis currently serves as Assistant Professor in the Department of Commerce and Marketing at Technological Educational Institute of Crete in Greece and as research associate in Research & Development of Telecommunications Systems Laboratory at Centre for Technological Research of Crete. His research interests include cognitive radio networks, radio resource management, interactive television broadcasting, networking traffic analysis, end-to-end QoS, mobile networks, dynamic bandwidth management and next generation networks.

Users Review

From reader reviews:

Joan Myers:

The book Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) has a lot of information on it. So when you make sure to read this book you can

get a lot of advantage. The book was authored by the very famous author. The author makes some research previous to write this book. That book very easy to read you can find the point easily after reading this article book.

Miguel Philip:

Reading can called head hangout, why? Because if you find yourself reading a book specifically book entitled Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) the mind will drift away trough every dimension, wandering in each and every aspect that maybe unfamiliar for but surely can become your mind friends. Imaging just about every word written in a publication then become one contact form conclusion and explanation that will maybe you never get ahead of. The Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) giving you one more experience more than blown away the mind but also giving you useful data for your better life in this particular era. So now let us teach you the relaxing pattern at this point is your body and mind will be pleased when you are finished examining it, like winning an activity. Do you want to try this extraordinary spending spare time activity?

Patricia Miller:

This Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) is great e-book for you because the content which can be full of information for you who else always deal with world and also have to make decision every minute. This specific book reveal it information accurately using great arrange word or we can state no rambling sentences in it. So if you are read that hurriedly you can have whole data in it. Doesn't mean it only provides you with straight forward sentences but hard core information with beautiful delivering sentences. Having Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) in your hand like obtaining the world in your arm, data in it is not ridiculous one particular. We can say that no publication that offer you world throughout ten or fifteen tiny right but this reserve already do that. So , this is good reading book. Hello Mr. and Mrs. occupied do you still doubt that?

Florinda Redfern:

You can spend your free time to study this book this reserve. This Resource Management in Mobile Computing Environments (Modeling and Optimization in Science and Technologies) is simple to deliver you can read it in the recreation area, in the beach, train as well as soon. If you did not possess much space to bring typically the printed book, you can buy the e-book. It is make you better to read it. You can save often the book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.
