Embedded Systems Design with the Atmel AVR Microcontroller (Synthesis Lectures on Digital Circuits and Systems) By Steven Barrett

This textbook provides practicing scientists and engineers an advanced treatment of the Atmel AVR microcontroller. This book is intended as a follow-on to a previously published book, titled Atmel AVR Microcontroller Primer: Programming and Interfacing. Some of the content from this earlier text is retained for completeness. This book will emphasize advanced programming and interfacing skills. We focus on system level design consisting of several interacting microcontroller subsystems. The first chapter discusses the system design process. Our approach is to provide the skills to quickly get up to speed to operate the internationally popular Atmel AVR microcontroller line by developing systems level design skills. We use the Atmel ATmega164 as a representative sample of the AVR line. The knowledge you gain on this microcontroller can be easily translated to every other microcontroller in the AVR line. In succeeding chapters, we cover the main subsystems aboard the microcontroller, providing a short theory section followed by a description of the related microcontroller subsystem with accompanying software for the subsystem. We then provide advanced examples exercising some of the features discussed. In all examples, we use the C programming language. The code provided can be readily adapted to the wide variety of compilers available for the Atmel AVR microcontroller line. We also include a chapter describing how to interface the microcontroller to a wide variety of input and output devices. The book concludes with several detailed system level design examples employing the Atmel AVR microcontroller. Table of Contents: Embedded Systems Design / Atmel AVR Architecture Overview / Serial Communication Subsystem / Analog to Digital Conversion (ADC) / Interrupt Subsystem / Timing Subsystem / Atmel AVR Operating Parameters and Interfacing / System Level Design

Editorial Review

Users Review

From reader reviews:

Lois Yale:

Spent a free the perfect time to be fun activity to perform! A lot of people spent their spare time with their family, or their friends. Usually they carrying out activity like watching television, planning to beach, or picnic in the park. They actually doing same every week. Do you feel it? Do you wish to something different to fill your current free time/ holiday? Could be reading a book can be option to fill your no cost time/ holiday. The first thing that you will ask may be what kinds of publication that you should read. If you want to consider look for book, may be the book untitled Embedded Systems Design with the Atmel AVR Microcontroller (Synthesis Lectures on Digital Circuits and Systems) can be good book to read. May be it may be best activity to you.

Johnny Rogowski:

The actual book Embedded Systems Design with the Atmel AVR Microcontroller (Synthesis Lectures on Digital Circuits and Systems) has a lot associated with on it. So when you make sure to read this book you can get a lot of gain. The book was published by the very famous author. Tom makes some research prior to write this book. This particular book very easy to read you will get the point easily after scanning this book.

Edward Florez:

Embedded Systems Design with the Atmel AVR Microcontroller (Synthesis Lectures on Digital Circuits and Systems) can be one of your beginner books that are good idea. Most of us recommend that straight away because this book has good vocabulary that will increase your knowledge in vocabulary, easy to understand, bit entertaining but nonetheless delivering the information. The article author giving his/her effort that will put every word into delight arrangement in writing Embedded Systems Design with the Atmel AVR Microcontroller (Synthesis Lectures on Digital Circuits and Systems) however doesn't forget the main place, giving the reader the hottest as well as based confirm resource details that maybe you can be one of it. This great information can certainly drawn you into brand new stage of crucial pondering.

Aaron Edgington:

In this period globalization it is important to someone to find information. The information will make you to definitely understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of referrals to get information example: internet, newspapers, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. Often the book that

recommended to you personally is Embedded Systems Design with the Atmel AVR Microcontroller (Synthesis Lectures on Digital Circuits and Systems) this book consist a lot of the information with the condition of this world now. This particular book was represented how does the world has grown up. The vocabulary styles that writer make usage of to explain it is easy to understand. Typically the writer made some analysis when he makes this book. Honestly, that is why this book suited all of you.
