Experimental Designs: Exercises and Solutions By D. G. Kabe, Arjun K. Gupta

This volume is a collection of exercises with their solutions in Design and Analysis of Experiments. At present there is not a single book which collects such exercises. Theseexercises have been collected by the authors during the last four decadesduring their student and teaching years. They should prove useful to graduate students and research workers in Statistics. In Chapter I, theoretical results that are needed for understanding the material in this book, are given. Chapter 2 lists the exercises which have been collected by the authors. The solutions of these problems are given in Chapter 3. Finally an index is provided for quick reference. Grateful appreciation for financial support for Dr. Kabe's research at St. Mary's University is extended to National Research Council of Canada and St. May's Uni versity Senate Research Committee. For his visit to the Department ofMathematics and Statistics the authors are thankful to the Bowling Green State University.

Editorial Review

Review

From the reviews:

"This interesting book provides a collection of theoretical exercises with solutions for instructors of graduate-level design of experiments classes. … The authors suggest that the book is suitable for graduate students of statistics and research workers. … This could be an interesting book for instructors of design and analysis of experiments classes looking to build their collection of available problems." (Christine M. Anderson-Cook, Journal of the American Statistical Association, Vol. 103 (481), 2008)

From the Back Cover

This volume provides a collection of exercises together with their solutions in design and analysis of experiments. The theoretical results, essential for understanding, are given first. These exercises have been collected during the authors teaching courses over a long period of time. These are particularly helpful to the students studying the design of experiments and instructors and researchers engaged in the teaching and research of design by experiment.

D. G. Kabe retired as Professor of Statistics from St. Mary's University in Canada, having taught statistics and guided Ph.D. students there. Earlier he has been a faculty member at the Dalhousie University, Northern Michigan University, and Wayne State University. He is the author/co-author of more than two hundred research papers and two books. His research interests include design and analysis of experiments, and multivariate statistical analysis.

Arjun K. Gupta is Distinguished University Professor and Professor of Mathematics and Statistics at Bowling Green State University, Bowling Green, Ohio. He has written more than 35 invited conferences, symposia, and journal papers and given more than 100 talks at national and international meetings during his 30-plus-year career. He is the co-author or co-editor of 12 books and has written more than 300 research articles. His main areas of interest include multivariate statistical analysis, distribution theory, and change point analysis. He is a Fellow of the American Statistical Association, the Institute of Statisticians, the Royal Statistical Society of England, and the Ohio Academy of Science, and an elected member of the International Statistical Institute.

Users Review

From reader reviews:

Marcus Casale:

What do you concentrate on book? It is just for students because they are still students or it for all people in the world, the actual best subject for that? Merely you can be answered for that problem above. Every person has different personality and hobby for each other. Don't to be obligated someone or something that they don't need do that. You must know how great and important the book Experimental Designs: Exercises and Solutions. All type of book are you able to see on many solutions. You can look for the internet sources or other social media.

Manuel Arndt:

As people who live in often the modest era should be change about what going on or information even knowledge to make them keep up with the era that is always change and move forward. Some of you maybe will certainly update themselves by reading books. It is a good choice in your case but the problems coming to you is you don't know which you should start with. This Experimental Designs: Exercises and Solutions is our recommendation so you keep up with the world. Why, because this book serves what you want and want in this era.

William Quesada:

Hey guys, do you really wants to finds a new book you just read? May be the book with the headline Experimental Designs: Exercises and Solutions suitable to you? The particular book was written by famous writer in this era. The actual book untitled Experimental Designs: Exercises and Solutionsis the one of several books that everyone read now. That book was inspired many people in the world. When you read this reserve you will enter the new way of measuring that you ever know just before. The author explained their strategy in the simple way, consequently all of people can easily to know the core of this e-book. This book will give you a great deal of information about this world now. To help you see the represented of the world within this book.

Mary Scruggs:

The book with title Experimental Designs: Exercises and Solutions includes a lot of information that you can study it. You can get a lot of advantage after read this book. This book exist new information the information

that exist in this e-book represented the condition of the world currently. That is important to yo7u to find out how the improvement of the world. That book will bring you inside new era of the internationalization. You can read the e-book on the smart phone, so you can read it anywhere you want.
